AUTOMATIC SENSOR CONTROL

DRY FOG / !! GENERATOR

WHY DO WE NEED STERILIZATION?

In general, aseptic preparation and manufacturing facilities, such as biosafety, laboratories, animal breeding facilities, internal laboratory, and production rooms needed to meet standard such as Good manufacturing practice(GMP), and Biological Safety Level(BSL-3), require sterilization control.

As well, sterilization is necessary for hospitals and health care facilities dealing with progeny which are sensitive to secondary infections and viral transmission.

WHERE DO WE NEED STERILIZATION?

WHAT IS STERILIZATION?

SANITIZATION TWO log = 10-2Using water mixed detergent for decontamination.

DISINFECTIONFIVE log = 10-5

Killing microorganisms except *spore of bacteria

SIX log = 10-6

Killing both
microbes and *spore
= Sterilization

A SUPERIOR, SAFE, ENVIRONMENTALLY FRIENDLY SOLUTION

Dry Fog Generator consists of low concentration 7% hydrogen peroxide which has less after effects in temperature, humidity, and lower PPM than general fumigation and plasma system, so it's safer and requires much shorter ventilation time.

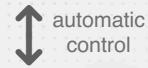

WITH 2 AVAILABLE COMBINATIONS

1) TEMPERATURE / HUMIDITY SENSOR

A combination of a temperature / humidity sensor with a recorder enabling automatic control of the generator / pump unit within the set humidity range.

Recorder Yokogawa GM-10 series Data(CSV output)

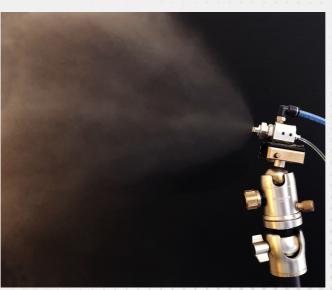

- · Temp.
- Humidity

Temp/Humidity sensor Vaisala HMP110

Temp range: -40~80°C

Humidity range : 0~100%RH

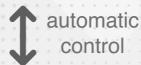

2 H2O2 SENSOR

A combination of a H2O2 sensor with a recorder enabling automatic control of the generator / pump unit within the set humidity range.

- · Temp
- · Humidity
- Hydrogen Peroxide(H2O2)

H2O2 sensor Vaisala HPP270

Temp range : 5∼50°C

Humidity range : 0∼100%RH

H2O2 concentration range : 0∼2,000ppm

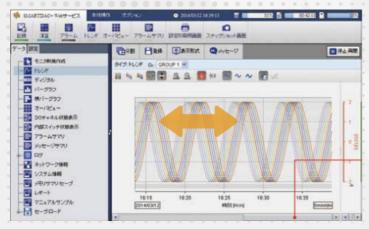

REALTIME MONITORING & ONLINE SETTING VIA WEB BROWSER

Providing easy temperature and humidity real time monitoring via web browser. No software installation required.

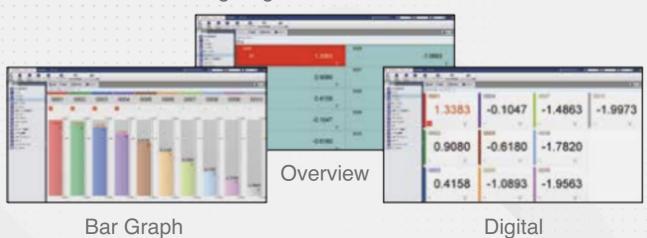

(H2O2 concentration can also be monitored using the optional H2O2 sensor.)

With scrolling bar, data graphs from past to present can be viewed seamlessly.

With 1second data scale, the data can be displayed in the duration up to one hour.

Real Time Monitoring Page

Upper humidity limit and lower limit humidity can be set by the recorder to automatically control the pump / generator unit.

(H2O2 sensor automatic control is also available with H2O2 concentration option.)
